Professional Profile

Full Stack Developer with more than 6 years of experience, specialized in creating robust and scalable solutions, with a focus on security, performance and process automation. Proficient in modern architectures, with strong performance in stacks based on JavaScript (Node.js, Express, React) and PHP (Laravel). I have a proven track record of success in leading and executing high-impact projects, applying clean code principles such as SOLID, DDD and TDD to deliver high-quality and value-generating products.

Technical Skills

Development:

Back-end: Laravel, Node.js, Express;

Front-end: React.js, Vue.js;

Databases: PostgreSQL, MongoDB, MySQL;

DevOps: Docker, CI/CD, Git, PM2;

Automation and Testing:

Testes: TDD (Test-Driven Development), Test Coverage, Jest, PHPUnit, Cypress, Selenium;

Automation: Web Scraping (Python and Ruby), Automation Scripts (Python);

Architecture and Best Practices:

Principles: SOLID (applied in Laravel and Node.js projects), Clean Architecture, DDD (Domain-Driven Design), DRY;

Padrões de design: Repository, Factory, Strategy, Observer;

Messaging: Asynchronous Systems, Twilio, Queues;

Other Technologies:

Desktop: C++ (Qt Framework)

Professional experience

Full Stack Developer – MVL Co. (February 2024 – Present)

I created and maintained a subscription application integrated with Nuvemshop, managing customers, products and orders through the Nuvemshop and Asaas APIs, with support for payments via PIX, card and boleto.

I implemented the front end using Vue.js and React, adapting the Nimbus framework, learned during the project, for integration with the store.

I made customizations in Twig and PHP on the Nuvemshop platform, ensuring compatibility and personalization of the user experience.

Full Stack Developer - Independent Contracts (August 2023 – January 2024)

Financial System: development of the financial system "Fundo Água", with modules of wallet, transactions, notifications, access control, middlewares, deposit via PIX (Santander API).

Educational System: made in Laravel and AdminLTE, with access control by profile (student, parents, teachers), grading system, subjects and subdomains for branches.

Municipal Portal: platform for city halls with user management via JWT, publication of institutional content and structure of subdomains by municipality. Created to compete in state bidding.

DevOps Developer - Comptroller General of the State of RN (August 2022 - July 2023)

I actively participated in the development and maintenance of intranet systems and the state's Transparency Portal, working with DevOps practices and automations in Python.

I developed web scraping routines for database manipulation and implemented a ChatBot for WhatsApp.

I worked with PHP and JavaScript/TypeScript systems, taking care of the integration between services and scalability.

System Analyst - CTINF (March 2021 - November 2021)

I worked on the creation and maintenance of the Police Management System (SISGP), a large-scale project developed for the state of Rio Grande do Norte, with a focus on stability and security, including redundancy in the database.

Full Stack Developer - Independent Contracts (January 2020 - March 2021)

Developed customized platforms with integration for payments via PIX from Mercado Pago.

I implemented solutions with SSR (Server-Side Rendering) using Inertia.js and Adonis.js.

I applied the principles of Clean Code, DRY and SOLID in all projects, aiming at clean and easy to maintain code.

Technical Support Intern - UFRN (August 2019 - December 2019)

I developed a registration system for lectures and video class systems for the advisor teacher.

I acted independently in all stages, from full-stack development to deployment and maintenance of the platform.

Project Advisor - EJECT (June 2018 - June 2019)

Managed the launch of projects based on customer needs.

I developed a children's recreation store management system with calculations of time, price and identification of those responsible through photos.

Education

Bachelor of Science and Technology (2017 - 2022)

Universidade Federal do Rio Grande do Norte (UFRN)

Training with a strong foundation in engineering and a focus on analytical thinking and problem solving. During the course, I gained knowledge in areas such as mechatronics engineering and brain-machine interfaces, which directly influenced my passion for technology and my trajectory to become a programmer.

Information Technology Technician (2013 – 2016)

Federal Institute of Education, Science and Technology of Rio Grande do Norte (IFRN)

Development of solutions for multisensory disabilities, including **FONALIZE**, an Android 5 application in Kotlin and Java, which uses the Fast Fourier Transform (FFT) algorithm to assist the oralization of the hearing impaired. The project was published and has the **DOI**: 10.37885/220910147.

Certifications

Javascript Algorithms and Data Structures – FreeCodeCamp.

EF SET English Certificate (B2 Upper Intermediate) – EF SET.

Languages

Portuguese: Native.

English:

Reading: C2 (Proficient)

Hearing: B2 (Upper Intermediate)

Conversation: B1 (Intermediate)
